Electro-acoustic analogies

The **compliance** of a gas is its property of changing in volume when subjected to an applied force. It is the reciprocal of stiffness.

Impedance analogy

Mobility analogy

Electric impedance: $V = I \cdot Z \rightarrow Z = \frac{V}{I}$

Acoustic impedance:

$$Z_A = \frac{p}{U} = R_A + j\omega M_A + \frac{1}{j\omega C_A}$$

$[N.s/m^5]$

Electric	Z analogy	Mob. Analogy
Voltage	Pressure (p)	Flow (U)
Current	Flow (U)	Pressure (p)

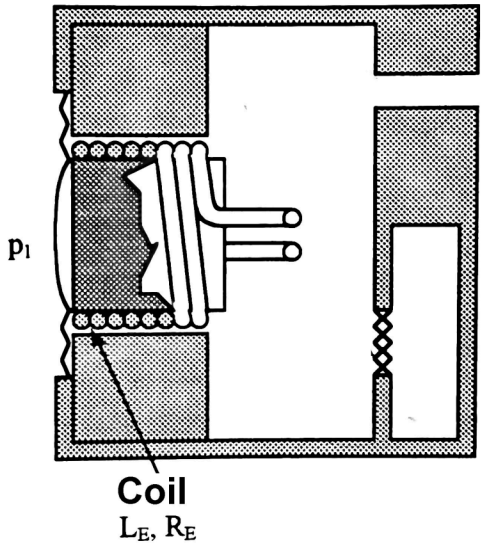

p (Pressure [Pa])

U = S.u $[m^3/s]$ (Volumetric Flow or volumetric velocity)

Electro-acoustic analogy I

Dynamic Microphone

Impedance type circuit

R_{AD} Diaphragm's Acoustic Resistance

C_{AD} Diaphragm's Acoustic Compliance

M_{AD} Diaphragm's Mass

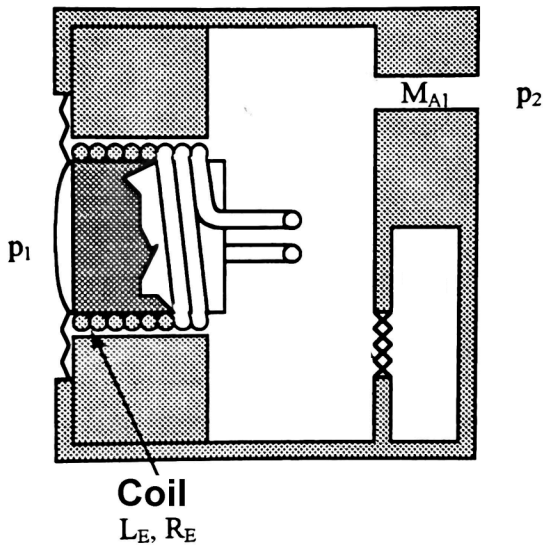

R_E Electric resistance

L_E Electric inductance

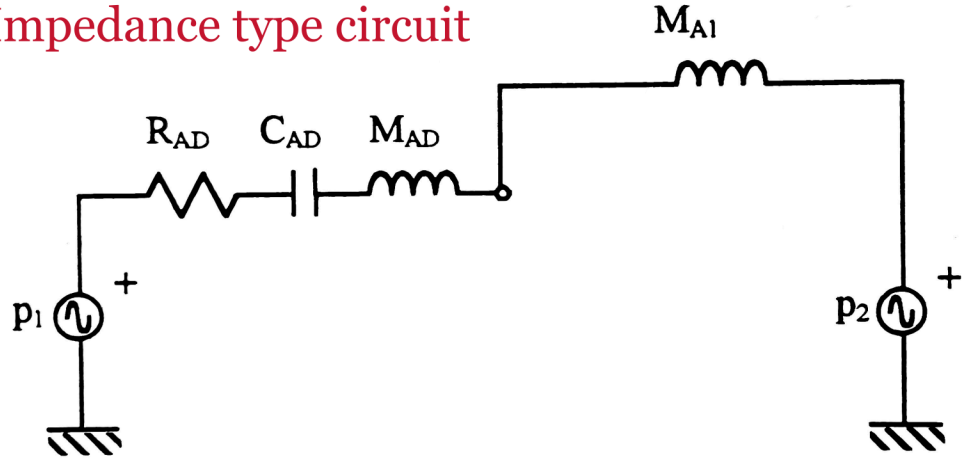

BOTE, José Luis Sánchez. *Transductores electroacústicos*. Fundación General UPM, ETSI Telecomunicación, 2014, p52.

Electro-acoustic analogy I

Dynamic Microphone

Impedance type circuit

R_{AD} Diaphragm's Acoustic Resistance

C_{AD} Diaphragm's Acoustic Compliance

M_{AD} Diaphragm's Mass

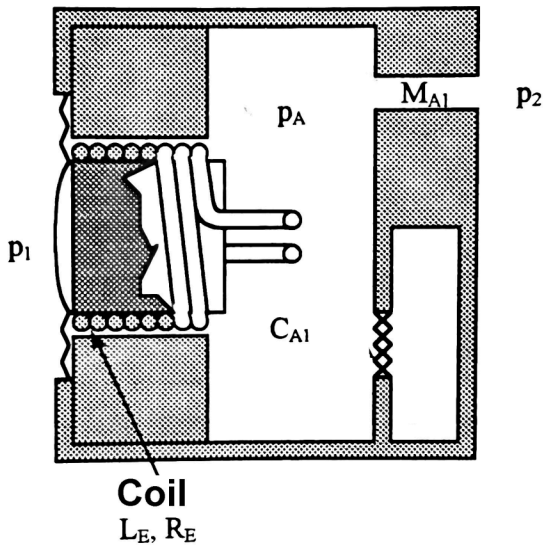

R_E Electric resistance

L_E Electric inductance

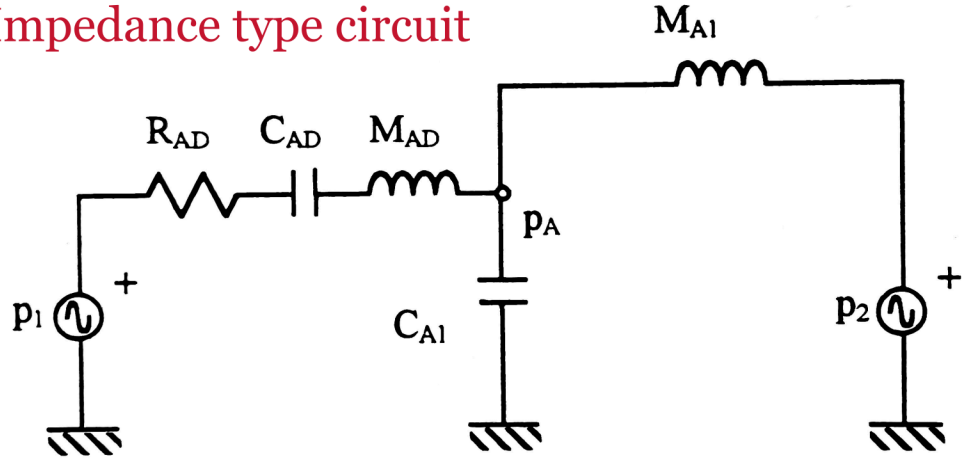

BOTE, José Luis Sánchez. *Transductores electroacústicos*. Fundación General UPM, ETSI Telecomunicación, 2014, p52.

Electro-acoustic analogy I

Dynamic Microphone

Impedance type circuit

R_{AD} Diaphragm's Acoustic Resistance

C_{AD} Diaphragm's Acoustic Compliance

M_{AD} Diaphragm's Mass

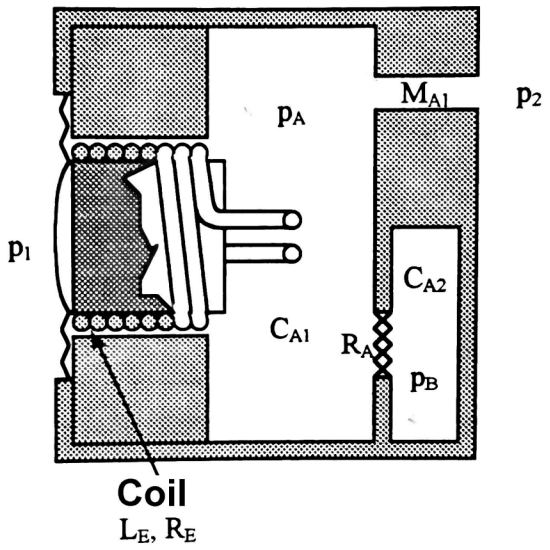

R_E Electric resistance

L_E Electric inductance

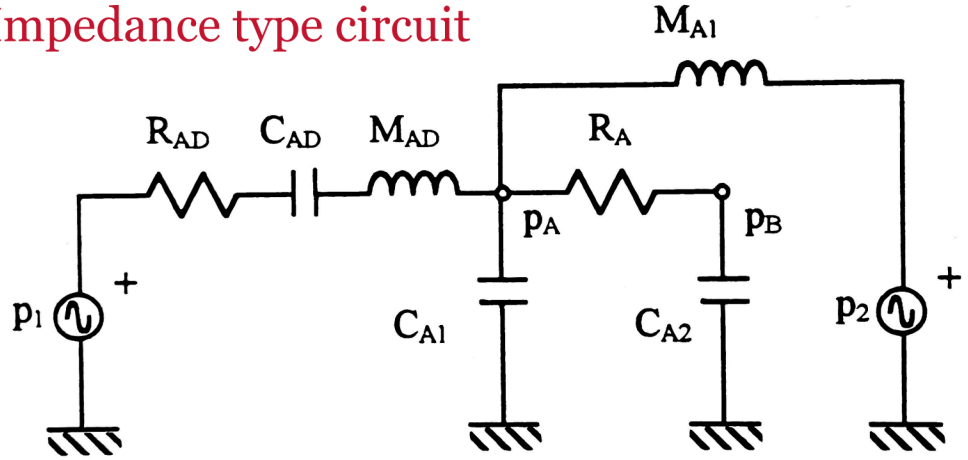

BOTE, José Luis Sánchez. *Transductores electroacústicos*. Fundación General UPM, ETSI Telecomunicación, 2014, p52.

Electro-acoustic analogy I

Dynamic Microphone

Impedance type circuit

R_{AD} Diaphragm's Acoustic Resistance

C_{AD} Diaphragm's Acoustic Compliance

M_{AD} Diaphragm's Mass

R_E Electric resistance

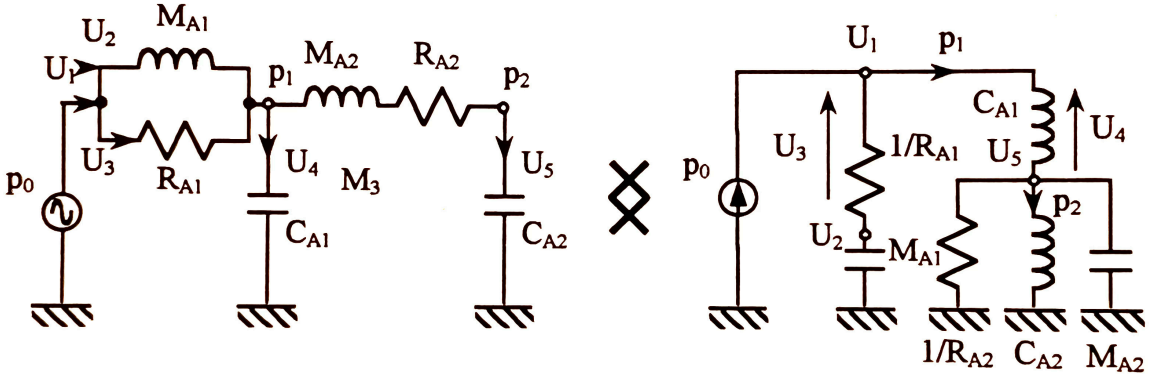

L_E Electric inductance

BOTE, José Luis Sánchez. *Transductores electroacústicos*. Fundación General UPM, ETSI Telecomunicación, 2014, p52.

Electro-acoustic analogy II

Impedance to Mobility analogy transformations

1. Serial elements transformed into parallel / Parallel into serial
2. Condensers ($C_{M,A}$) transformed into coils ($C_{M,A}$)
   Coils ($M_{M,A}$) into condensers($M_{M,A}$)
   Resistances are transformed into inverse resistances ($R_{M,A}$ <->$1/R_{M,A}$)
3. The sum of currents reaching a knot from elements in parallel are transformed into the sum of voltages of the analogous elements in series, and vice-versa.

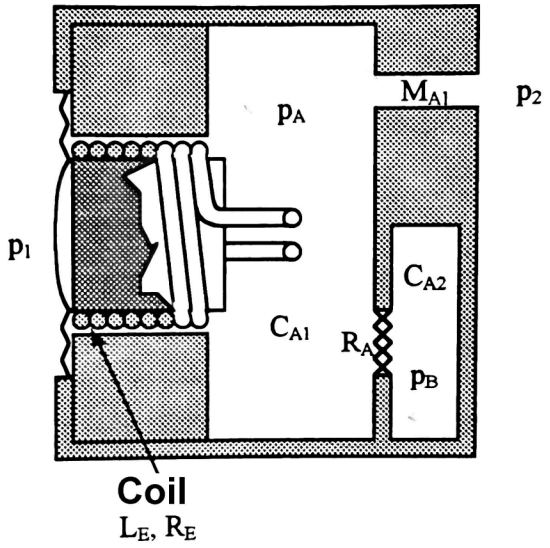

4. Voltage generators are transformed into current generators and vice-versa
5. Transformers invert their transformation rate

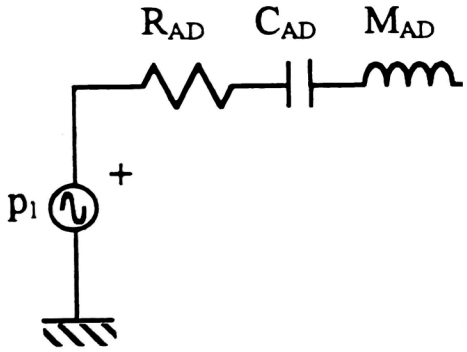

1:S to S:1

Electro-acoustic analogy III

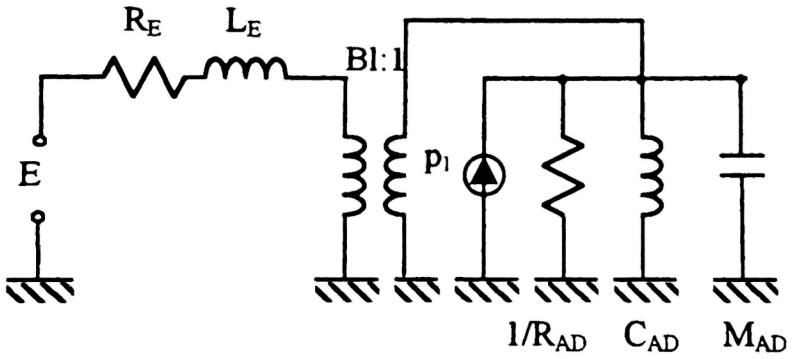

Dynamic Microphone

Impedance type circuit

Mobility type circuit

R_{AD} Diaphragm's Acoustic Resistance

C_{AD} Diaphragm's Acoustic Compliance

M_{AD} Diaphragm's Mass

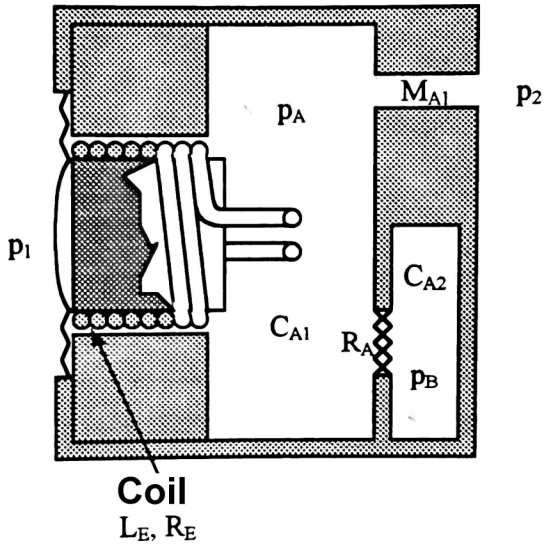

R_E Electric resistance

L_E Electric inductance

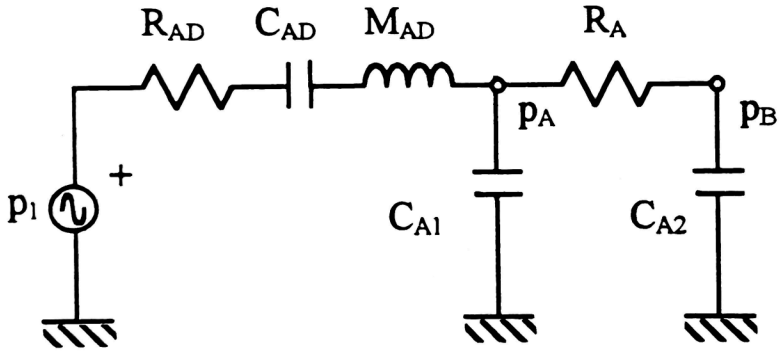

BOTE, José Luis Sánchez. *Transductores electroacústicos*. Fundación General UPM, ETSI Telecomunicación, 2014, p52.

Electro-acoustic analogy III

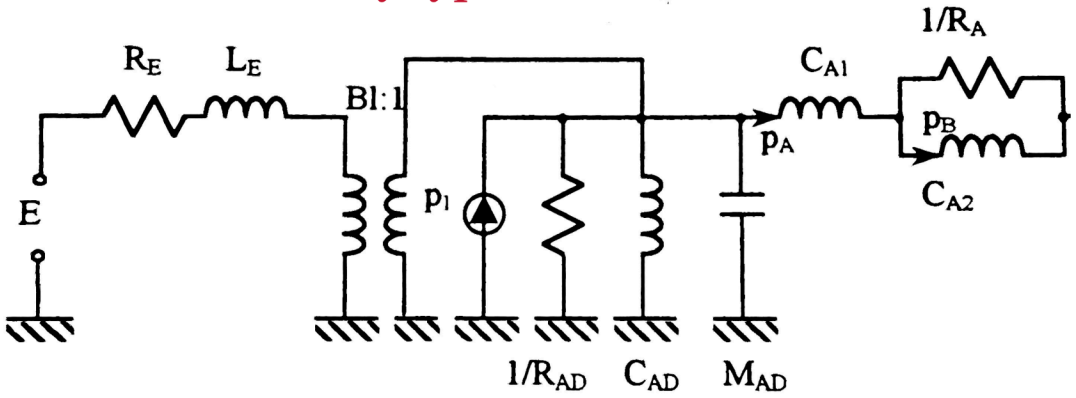

Dynamic Microphone

Impedance type circuit

Mobility type circuit

R_{AD} Diaphragm's Acoustic Resistance

C_{AD} Diaphragm's Acoustic Compliance

M_{AD} Diaphragm's Mass

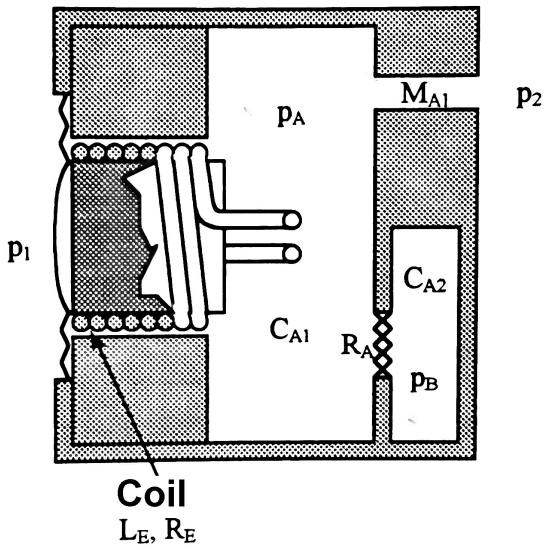

R_E Electric resistance

L_E Electric inductance

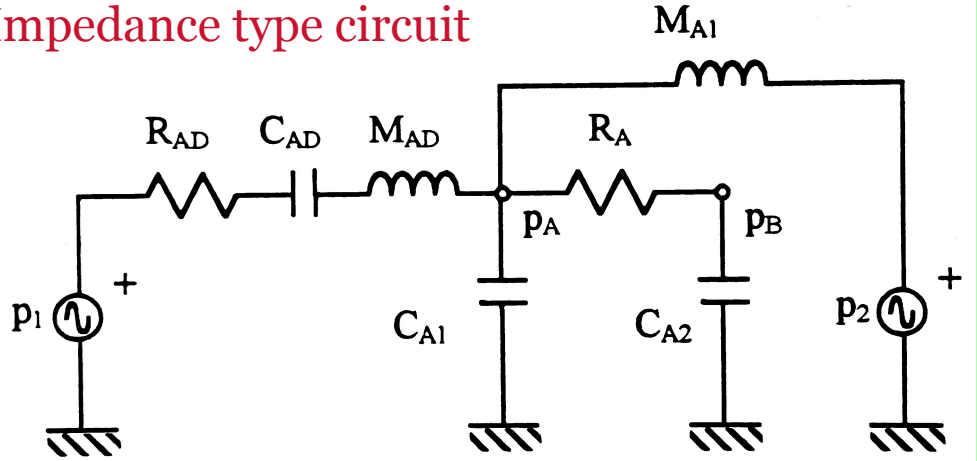

BOTE, José Luis Sánchez. *Transductores electroacústicos*. Fundación General UPM, ETSI Telecomunicación, 2014, p52.
